LNK INDUSTRIES

# Wood Products Technology

# WOOD HANDLING EXPERTS

TTS was founded in 1993 and has become a vastly experienced and constantly evolving company.

Starting off as a subcontractor for world-wide known plywood, veneer or laminated veneer lumber (LVL) machinery suppliers, after a while TTS started the production of self-designed and manufactured equipment.

At present TTS is known as a reliable subcontractor and as an independent

supplier of non-standard equipment and complete solutions for the woodworking industry.

With more than 20 years of experience in the engineering and installation of various equipment, our designers and process engineers have a deep understanding and professional approach to suggesting the best solution for your particular task.

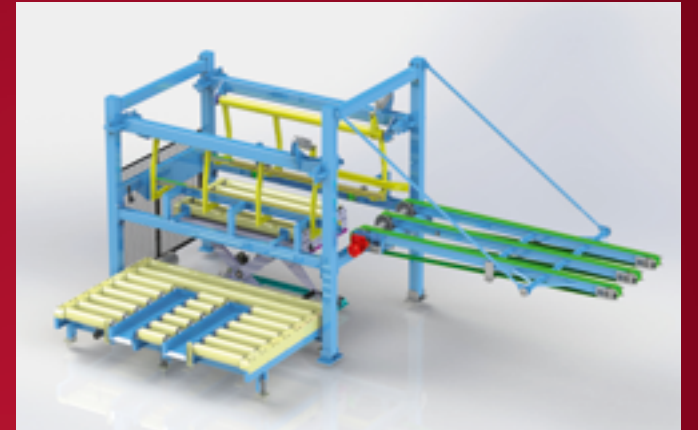

As a supplier of non-standard facilities for the woodworking industry, we are able to offer conveyers for round wood and wastes, rotary and lift-up tables or equipment for the loading/unloading of plywood and other products of different sizes that can be incorporated into the standard production line of any world known producer.

We have designed, produced and installed a variety of integrated solutions for wood manufacturers in many regions and countries with different environmental conditions. Our equipment can be water or dust proof and is able to maintain its performance in a wide range of temperatures starting from -50 and up to +40 C.

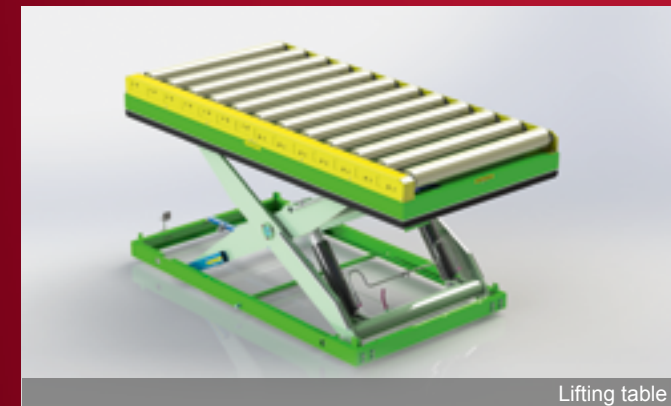

To power, control and manage the facilities used in integrated systems, TTS apply hydraulic, pneumatic, electrical drives and self developed automation solutions based on the world's best equipment according to the customer's needs, preferences or environmental conditions and topography.

TTS' core business is material handling. Over the years a lot of different kinds and types of conveyers with different lengths (up to 4 km) and requirements of usage have been designed, built and tested.

Depending on the size of the equipment produced, we assemble and test it fully or partially to insure fast and easy installation at the place of usage.

Plywood unloader

Lifting table

Wood chip conveying system

Today TTS is well recognised in the Baltics and Russia for its expertise in the design, production and installation of turnkey projects and non-standard equipment produced for and installed in many plywood and veneer manufactures.

TTS offers equipment which will increase the efficiency of production lines and can be integrated into existing systems, or alternatively create an independent unit according to your needs.

A wide range of solutions for non-standard equipment is designed and built. Among them are rotary tables, lift-up tables, plywood loaders, cross stations, stackers, feeders, log pushers and many others. Our designers will create a facility that fits your particular requirements the best.
